

Here is the complete **Proposed Solution Template** with all fields filled in for your project:

Project Design Phase

Proposed Solution Template

- **Date:** 2 October 2026
- **Team ID:** [Your Team ID]
- **Project Name:** Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
- **Maximum Marks:** 2 Marks

Proposed Solution Details

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Manual creation and routing of catalog tasks for standard laptop requests lead to processing delays, potential manual assignment errors, and increased administrative overhead for IT operations teams.
2	Idea / Solution description	Automate the post-approval procurement workflow using ServiceNow Flow Designer. Once a standard laptop service request reaches the configured approval condition, the flow automatically generates a Catalog Task under the related Requested Item (RITM), updates the short description, and assigns the task directly to the Hardware assignment group for laptop configuration.
3	Novelty / Uniqueness	Utilizes low-code ServiceNow Flow Designer logic to seamlessly bridge Service Catalog request approvals with automated task generation and targeted group routing, eliminating reliance on legacy workflow scripts and ensuring fast execution.
4	Social Impact / Customer Satisfaction	Significantly accelerates hardware provisioning turnaround time, improving employee onboarding experience, operational efficiency, and overall end-user satisfaction with enterprise IT service fulfillment.
5	Business Model (Revenue Model)	Internal IT Service Operations Optimization — reduces fulfillment labor hours, lowers operational overhead, decreases overall mean time to resolution (MTTR), and improves SLA adherence.
6	Scalability of the Solution	Highly scalable across enterprise service catalogs; the modular Flow Designer architecture can easily be extended or adapted for other hardware items, software requests, and multi-departmental approval workflows.
