

Project Design Phase

Solution Architecture

- **Date:** 2 October 2026
- **Team ID:** [Your Team ID]
- **Project Name:** Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
- **Maximum Marks:** 4 Marks

Solution Architecture Details

1. Architecture Overview

The solution automates the post-approval procurement workflow in ServiceNow using **Flow Designer** to replace manual task creation. Once an employee submits a catalog request for a standard laptop and it receives approval, the flow automatically generates a Catalog Task (`sc_task`), populates required operational details, and routes it directly to the **Hardware** assignment group for provisioning.

2. Technical Architecture & Components

- **Trigger Layer (Service Catalog):**
 - **Service Catalog Item:** Standard Laptop Request.
 - **Requested Item (`sc_req_item`):** Holds specific order details, status, and user inputs.
- **Logic & Process Automation Layer (ServiceNow Flow Designer):**
 - **Trigger Condition:** Created/Updated Record on `sc_req_item` where `Approval == Approved` and `Item == Standard Laptop`.
 - **Action 1 (Create Task):** Generates a record in the Catalog Task table (`sc_task`).
 - **Action 2 (Field Mapping):** Sets `Parent = Triggering RITM`, `Short Description = "Configure and Dispatch Standard Laptop"`, `Assignment Group = Hardware`.
 - **Action 3 (State Management):** Updates RITM state to "Work in Progress".
- **Fulfillment Layer (Service Desk Operations):**
 - **Assignment Group:** Hardware Team dashboard.
 - **Fulfillment Task:** Technicians receive the automatically assigned task, configure the standard laptop, update the task to "Closed Complete", and conclude fulfillment.

3. Data & Execution Flow

4. Features & Key Requirements

- **Automated Task Routing:** Eliminates manual triage by routing hardware setup tasks directly to the Hardware group.
- **Low-Code Maintenance:** Built entirely within ServiceNow Flow Designer, minimizing complex JavaScript custom code and ensuring simple platform upgrades.
- **Traceability & Governance:** Maintains full relational mapping between Request (sc_request), Requested Item (sc_req_item), and Catalog Task (sc_task).
- **SLA & Speed Optimization:** Reduces turnaround time from request approval to task assignment to under 1 minute.
